

Taiyaba Khatoon . Jarvis Consulting

Business Systems Analyst with hands-on experience in analyzing business requirements, designing data-driven systems, and supporting end-to-end system implementations. Skilled in translating business needs into technical solutions using SQL, Linux, relational databases, and BI tools. Experienced in working with cross-functional teams, validating system outputs, and enabling data-informed decision-making. Trained in Agile and Scrum methodologies with exposure to infrastructure monitoring, database design, and analytics platforms in client-facing consulting environments.

Skills

Proficient: Business Systems Analysis, SQL, PostgreSQL, Linux/Bash, Python, Agile/Scrum, Git

Competent: Power BI, Excel, Docker, Data Validation, Requirements Documentation, Data Analysis, Pandas

Familiar: Stakeholder Communication, Process Mapping, System Monitoring, Data Modeling, Reporting Automation, Requirements Elicitation

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_TaiyabaKhatoon

Linux Cluster Monitoring Agent [GitHub]: Analyzed infrastructure monitoring requirements and supported the design of a Linux-based system to track CPU, memory, disk, and host metrics across multiple nodes. Implemented Bash scripts and automated data collection using cron, validated system outputs, and stored metrics in a PostgreSQL database deployed via Docker. Used SQL to verify data accuracy and support system monitoring, capacity planning, and operational analysis.

RDBMS and SQL Implementation [GitHub]: Supported the design and implementation of a relational database system to meet analytical and reporting requirements. Analyzed data needs, designed normalized schemas, validated table relationships using primary and foreign keys, and tested system behavior through complex SQL queries. Deployed the database using Docker and ensured data integrity, performance, and alignment with business use cases.

Python Data Analytics London Gift Shop [GitHub]: Analyzed retail transaction data using Python (Pandas, NumPy, Matplotlib) to identify sales trends and customer purchasing behavior. Cleaned and transformed raw data, performed exploratory analysis, and applied RFM segmentation to identify high-value customer groups and seasonal sales patterns to support data-driven business decisions.

Business Requirements Document for Linux Cluster Monitoring Agent [GitHub]: Conducted business analysis to define requirements for a Linux-based monitoring solution that automates the collection of hardware and resource usage metrics across cluster nodes. Identified the business problem, defined project scope and stakeholder needs, and documented functional and non-functional requirements. Produced a Business Requirements Document outlining monitoring objectives, implementation approach, and MVP delivery for centralized system performance monitoring.

Software Requirements Document for Retail Stock Trading Application [GitHub]: Conducted stakeholder elicitation to gather business and system requirements for a retail stock trading platform designed for independent investors. Analyzed business objectives and translated them into structured system requirements, including user stories, use case interactions, trading workflows, and data model design. Developed a comprehensive Software Requirements Document defining functional and non-functional requirements, system architecture, infrastructure considerations, and project timeline for a scalable platform supporting stock search, portfolio monitoring, and buy/sell trading operations.

Highlighted Projects

Business Insights 360 [GitHub]: Designed a business intelligence system to support executive decision-making by analyzing revenue, occupancy, and performance KPIs across multiple business dimensions. Translated business requirements into data models and dashboards using Power BI and SQL, validated data accuracy across sources, and delivered insights that enabled stakeholders to monitor trends, identify top-performing entities, and improve strategic planning. Live Power BI dashboard available at <https://app.powerbi.com/view?r=eyJrIjoicmYxM2I0Y2EtN2Y5OC00MzI5LWJjYzAtZGUzMmE1MmU3Mj>. Portfolio overview available at <https://codebasics.io/portfolio/Taiyaba-Khatoon>.

Workforce Layoffs Insight (SQL-EDA) [GitHub]: Analyzed large-scale workforce layoff data across companies, industries, and regions to support workforce trend analysis and decision-making. Designed and executed SQL-based analytical workflows using CTEs, window functions, time-series analysis, rolling totals, and ranking logic to validate patterns over

time. Identified peak layoff periods, top affected organizations, and industry-level trends to support data-driven workforce insights and reporting.

HR Data Analytics [GitHub]: Analyzed workforce attendance and work-from-home patterns to support HR decision-making and policy evaluation. Examined attendance trends across weekdays, identified average presence rates, work-from-home distribution, and sick leave patterns using Excel and Power BI. Highlighted increasing sick leave trends and day-wise attendance behavior to support balanced workforce planning, retention strategies, and data-driven HR policy recommendations.

P & L Analysis Report (Financial Analytics): Designed and implemented a financial reporting system to analyze Profit and Loss performance over a four-year period for business decision support. Developed dynamic reports using Excel Pivot Tables, Power Query, and DAX formulas to uncover revenue and cost insights. Automated data preparation workflows to reduce manual effort and improved calculation flexibility and report usability to support accurate and timely financial analysis.

Professional Experiences

Business Systems Analyst, Jarvis (Jan 2026-present): Supported business and systems analysis activities in a client-facing consulting environment by analyzing business requirements and supporting end-to-end system implementations. Collaborated with stakeholders to translate business needs into technical solutions, validated system outputs using SQL and data analysis techniques, and supported system design decisions across analytics, database, and infrastructure monitoring projects. Worked within Agile and Scrum frameworks to deliver structured, scalable, and business-aligned system solutions.

Data Analyst (Internship), AtliQ Technologies Pvt. Ltd. (May 2025 - Jul 2025): Supported analytics and reporting initiatives by analyzing datasets, validating system-generated outputs, and developing dashboards to support business decision-making. Worked with SQL, Excel, and BI tools to translate business questions into analytical logic and delivered insights that improved reporting accuracy and operational visibility.

Business Analyst (Internship), Pragra Inc. (May 2024 - Aug 2024): Assisted in business and systems analysis by gathering requirements, analyzing data, and supporting reporting solutions used by stakeholders. Documented business processes, validated data outputs, and collaborated with project teams to ensure system deliverables aligned with functional requirements and business objectives.

Education

Humber College (2022-2024), Post Graduate Certificate, Global Business Management-Financial Planning

Banasthali University (2018-2021), Bachelor of Business Administration, Business Administration

Miscellaneous

- ECBA (Entry Certificate in Business Analysis) IIBA (Aug 2024)
- Scrum Master Certification Agile/Scrum
- Microsoft Power BI Data Analyst (Prep) Udemy (Mar 2025)
